

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

The Town of Hinton Has Levels of Arsenic Above Drinking Water Standards

Our water system recently violated a drinking water standard. Although this is not an emergency, as our customers, you have a right to know what happened, what you should do, and what we did (are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. The table below shows the average amount of arsenic, in water samples from our system, exceeded the standard, or maximum contaminant level (MCL), for arsenic. The standard for arsenic is 0.010 mg/L.

Sample Site	Twelve Month Period	Arsenic Running Annual Average
CL2 Station (Country West #1, #2, #3), CL002	October 2016 to September 2017	0.011 mg/L

What should I do?

- There is nothing you need to do. **You do not need to boil your water** or take other corrective actions. However, if you have specific health concerns, consult your doctor.
- If you have a severely compromised immune system, have an infant, are pregnant, or are elderly, you may be at increased risk and should seek advice from your health care providers about drinking this water.

What does this mean?

This is not an emergency. If it had been, you would have been notified within 24 hours. However, some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system, and may have an increased risk of getting cancer.

What is being done?

The Town of Hinton is working with engineers and State officials to design and install an arsenic removal process for our water system.
